

What benefits do you get from a pergola?

A pergola ensures that you have extra space all year round. The NUUN Premium pergola is a modern terrace canopy featuring a high aesthetic value and functionality. A wide range of additional components: mosquito nets, zip screen roller blinds, sliding doors, lighting, sound system or independent heating to ensure the comfort of use.

The NUUN Premium pergola is a bioclimatic pergola system that perfectly meets the expectations of contemporary residential and commercial architecture. Thoughtfully designed structures respond to the latest architectural trends prevailing in outdoor spaces.

NUUN

— P R E M I U M —

Home is a sanctuary where we are truly ourselves. Therefore, it is so important to feel good and safe in it. To make your space comfortable and functional. Living in harmony with nature, let's create a home with a premium outdoor relaxation and leisure area. The NUUN pergola will allow you to create a summer lounge where you can „breathe more deeply”, regardless of the weather or the season.

Wondering if the NUUN Premium Pergola is right for your home? The answer is simple. YES.

With their modular solutions and depending on the specific site, pergolas can be installed as terrace pergolas at the building wall or as free-standing garden pergolas.

The latter are independent structural landscape facilities, which increase the functionality of our gardens and allotments. The NUUN Premium Pergola is a solution suited to both a modern project and to a traditional house design.

Will the NUUN Premium pergola meet all your expectations? PROBABLY YES

It is a year-round durable building system that provides protection from the sun, rain and snow. The light and aesthetic modular structure with rotating roof slats is a modern solution for free-standing, terrace and garden development.

When the side walls are clad with glass panels and heated with infra-red heaters, the space can be used regardless of the weather, even in autumn and winter. They are made of the highest quality materials resistant to external factors to ensure long trouble-free use.
